

## **Post Operative Discharge – Dental**

1. Your pet can have a small drink of water the same evening of the surgery, but if your pet vomits after drinking, withhold water until the next day. If tolerating water you may offer a small amount of food. If vomiting, withhold food until the next day. Call our office if vomiting persists or if no interest in food or water the day after surgery.
2. Your pet may prefer soft food for the next few days. Adding water to his/her normal dry food and allowing it to soak in should be sufficient. No special food is needed.
3. If you pet had extractions today he/she may experience some mild bleeding. Do not be alarmed, this may occur on/off for the next couple days. If bleeding is continuous or persists longer than a couple days please call the office.
4. If your pet has been on or is going home with antibiotics please give until gone.
5. Call our office if your pet is showing any sign of illness.
6. Call our office if your pet is showing any signs of discomfort or pain.
7. Suture/Staple removal Appointment needed: \_\_\_\_\_
8. Recheck exam needed: \_\_\_\_\_
9. Special Diet needed: \_\_\_\_\_

### **MVAH can be reached at 570-386-3088.**
